

# MANCHESTER SCHOOL OF ARCHITECTURE

## AGENDA

We will be designing an accessible sensory garden for children and families located in the Martenscroft Nursery School. It is a place for the community to get away from it all, where time stops and demands on life are temporarily non-existent. We invite children to explore their senses through a series of installations called 'chapters' that will provide a sensory stimulation critical to healthy brain development. These 'chapters' will support physical fitness, health, mood and cognition as well as introduce gardening and plant care from a young age.

## SKILLS

Students will be introduced to accessible sensory design for children. They will gain design and visual representation skills through elaborate workshops in sketching and model-making. We aim to design and build our very own 1:1 *senstory* prototype, so students should be motivated and creative.

a place to get away
