Physical Model Making
3D Modelling
Sketching

AGENDA

A hands-on, design-driven project to reimagine and transform an overgrown, neglected garden at Sales High School into a thriving, multifunctional space. Over two weeks, we will collaborate with the school's eco club to develop creative interventions that bring new life to this forgotten space, exploring ecological design and architectural solutions that could shape its future.

This project is about more than just clearing an overgrown garden—it's about envisioning a place where students can connect with nature, learn about gardening and sustainability, and find a peaceful retreat within the school grounds. The goal is to create a space that is both educational and restorative—a place where students can develop hands-on gardening skills, engage with the environment, and experience the benefits of green space in their daily lives. It will be a space for quiet study, conversation, and relaxation, sheltered within nature, offering a moment of tranquility amidst the busy school day.
