

The year is 2026. Energy prices in England have climbed to heights once thought impossible. The screens glow with numbers rising. Profits surge. Boardrooms celebrate. Streets fall quiet. Homes dim. We are told this is stability. We are told this is the system.

But walls can generate. Roofs can store. Buildings can think for themselves.

We are here to break the grid's monopoly – to retrofit what stands, to decentralise power, to return generation to the people.

Self-sufficient. Self-generated. Self-owned.

And you will see why 2026 doesn't have to be like 2026.
